

IN THE SPECIFICATION

Please replace the paragraph beginning at page 10, line 15, with the following rewritten paragraph:

The outermost layer was coated with an aqueous solution containing Eudragit™ RS30D "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)" which is a relatively water-insoluble macromolecular substance, talc, acetylated monoglyceride (Myvacet™ 9.45) and Polysorbate 80, having the actual weight to be coated.

Please replace the paragraph beginning at page 11, line 21, with the following rewritten paragraph:

The granules were coated with an aqueous solution containing Eudragit™ RS-100 "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)", Eudragit™ RS-100L "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)", triethyl citrate and talc, having the actual weights to be coated, thereby forming a layer containing a water-insoluble macromolecular substance.
